Student Ambassador Projects

IELTS Prep Gap: Students lack personalized, real-time feedback in current IELTS tools.

Challenge: Static practice materials fail to adapt to learners' strengths and weaknesses.

Our Angle: Build an **AI-first learning assistant** that ensures:

- Accurate band score prediction.
- Actionable feedback (strengths, weaknesses, suggestions).
- Continuous progress tracking across Speaking, Writing, Reading, and Listening.

Vision: Democratize IELTS preparation with accessible, cloud-based, AI-driven learning.

The Opportunity

1. Industry Trends & Pain Points

Explosion of IELTS demand: Millions of students across Asia, Africa, and beyond attempt IELTS every year to pursue higher studies or immigration.

Status quo problem: Current prep solutions are static – mock books, PDFs, or rigid apps that give the same material to everyone.

Pain point: Students waste time and money preparing without truly knowing their weaknesses. Traditional coaching centers offer generic feedback, not personalized guidance.

Hidden issue: Many learners don't realize that not tracking progress systematically leads to repeated mistakes, plateaued improvement, and ultimately, lower band scores.

2. Why big companies should care

Missed opportunity: Global EdTech giants are focused on mass distribution but not personalization.

Our edge as a startup: We are lean, innovative, and closer to the ground reality. We can rapidly build and test disruptive AI-first tools that address **real user struggles** that big firms may overlook.

Value to them: Partnering with us gives them an **innovation pipeline**—they can integrate our AI-driven insights into their ecosystem, improving retention and satisfaction.

3. How we disrupt & inspire

Empathy: We put ourselves in the learner's shoes—nervous before the exam, unsure where to improve, frustrated by vague “band 6.5” results.

Education: Instead of generic scores, our platform explains *why* a student lost points, and how to fix it—like a personal AI coach available 24/7.

Inspiration: Students don't just practice—they **see their growth** on dashboards, track trends, and feel motivated to push further.

4. Opportunity Story (Paint the picture)

Imagine a student in a Tier-2 Indian city. She can't afford expensive tutors but dreams of studying abroad.

- Today: She buys test books, watches random YouTube videos, and still feels lost.
- With us: She logs in, practices speaking → AI transcribes, scores, and explains. She writes an essay → AI pinpoints grammar issues. Her dashboard shows she's moving from Band 6.0 to 7.5 over a month.
- That journey—accessible, affordable, and guided—is the **game-changing opportunity**.

5. Key Message for Slide

- IELTS prep = broken & static.
- Learners lack real-time, adaptive feedback.
- Our AI-first platform personalizes the journey.
- Huge opportunity to democratize global education.

Solution

Why we built it IELTS prep is static, not personal ; learners don't know <i>why</i> they lose marks or how to improve fast. We built an AI coach that scores and explains across all four sections with progress tracking.	How we address pain points & opportunities • Speaking: ASR → AI scoring with strengths/weaknesses & suggestions. • Writing (Essay): Band by criteria (TR/CC/LR/GRA) + detailed fixes. • Listening/Reading: Randomized sets, auto-eval, explanations, saved scores. • Progress: Saved to Supabase; dashboard shows overall band & trends.	What sets us apart (vs. big, served market) • Unlike generic prep apps and video courses, we deliver instant band scores with pinpointed, criteria-level guidance and persistent analytics, not just practice banks. • Time-to-value: no tutor scheduling; insights in seconds, stored to the cloud for continuous improvement.
What it is / Where we fit • Category: AI-first, personalized IELTS preparation—automated scoring + actionable feedback + analytics, delivered via cloud. 1-Month Progress Report – IELTS... • Stack: Next.js + FastAPI + Supabase + Azure AI (GPT-4, GPT-4o Transcribe, TTS).	Compelling customer examples (personas) • <i>Self-study candidate:</i> Uses Speaking + Essay nightly; sees band rise via trend dashboard and targeted tips. • <i>Working professional:</i> Short Listening/Reading drills at lunch; auto-evaluation and explanations keep momentum.	Call-to-action / next Rolling out timed simulations, Study Planner AI, richer analytics, mobile UX next month.

Takeaways

Wrap it up — What to do next

- **Stop:** using static books/courses that don't give personalized feedback.
- **Start:** practicing with **AI-scored** Speaking/Writing and **auto-evaluated** Reading/Listening, with results saved to your dashboard.
- **Without us, you can:** take mock tests and watch tips videos — but you'll still lack **criteria-level feedback** and **trend tracking**.
- **Faster:** instant band scores + actionable fixes after every attempt.
- **Simpler:** one login; all scores saved; clear progress and trend charts.
- **Cheaper:** scalable AI coaching reduces ongoing tutor time and costs.
